## Guide to results

<b>CLEAR</b>	Clear means we have tested for the mutation known to cause the disorder and have not found it. Ripley's Diva Dream will not develop the disorder and does not carry it.
<b>Carrier</b>	Carrier means we have tested for the mutation known to cause the disorder and have found one copy of it. Ripley's Diva Dream will not develop the disorder but can pass the mutation onto their offspring. If you choose to breed from this animal, care must be taken to ensure that any potential mate has tested CLEAR for the mutation Ripley's Diva Dream carries, otherwise approximately 25% of puppies will be affected with the disorder.
<b>AT RISK</b>	If your animal has any "at risk" mutations it means that our geneticists have determined that Ripley's Diva Dream is likely to develop the disorder. You should read the information about the disorder carefully, along with the notes left by our geneticists. It is advisable that you show this report to your vet during your next routine visit, unless otherwise indicated by the geneticist.

Disclaimer: we can only test for mutations which are currently known to cause specific disorders. This does not include mutations and disorders which have not yet been described.

Should Ripley's Diva Dream become ill you should always follow the advice of your veterinary surgeon.
